PROFESSIONAL SUMMARY

Full-Stack Software Engineer with hands-on experience building secure, scalable, production-grade systems across HealthTech, fintech, and business automation. Currently contributing to a blockchain-integrated healthcare platform, developing full-stack solutions using Spring Boot, Django, Node.js, and React. Strong track record in REST API design, system security, and production deployment, with proven ability to build and maintain multi-user systems that prioritize reliability, performance, and data integrity.

TECHNICAL SKILLS

Frontend Development

React.js (Advanced) • JavaScript (ES6+) • HTML5 • CSS3

- Build dynamic, responsive single-page applications
- Develop clean, reusable UI components

Backend & Databases

Django (Advanced) • Spring Boot (Java) • Node.js • Express.js • MySQL

- Design secure REST APIs with Django and Spring Boot
- Implement JWT authentication and Role-Based Access Control (RBAC)
- Build scalable backend architectures for production systems
- Optimize database performance and query efficiency

Deployment & Security

AWS • DigitalOcean • Hostinger VPS • Linux • SSL/HTTPS • DNS Management

- Deploy and maintain production systems on AWS, DigitalOcean, and Linux VPS environments
- Configure secure environments with SSL and access control
- Implement logging and monitoring for system stability
- Set up CI/CD pipelines using GitHub Actions for automated deployment

Additional Skills

M-Pesa Integration • Stripe • Blockchain Fundamentals (Ethereum/Hyperledger) • Git • Postman

- Payment gateway integration and transaction verification (M-Pesa, Stripe)
- API and unit testing with PyTest, JUnit, and Jest
- UI development with MUI and Radix component libraries
- Collaborative development workflows, working both independently and in small teams

PROFESSIONAL EXPERIENCE

Full-Stack Developer

Jan 2026 – Present

MedicinaChain — HealthTech Startup | Nairobi, Kenya

- Contributing to a secure healthcare platform connecting patients, providers, and pharmacies, serving 200+ active users
- Developing responsive frontend modules using React.js
- Designing and implementing RESTful APIs using Spring Boot, Django, and Node.js
- Implementing JWT authentication and RBAC security models
- Optimizing backend performance for multi-user environments
- Writing automated tests with JUnit and PyTest to maintain API reliability
- Setting up CI/CD pipelines with GitHub Actions for automated deployment
- Developing Python-based log monitoring tools for proactive error detection
- Supporting production deployment on AWS, SSL configuration, and Linux server maintenance
- Debugging production issues and improving system reliability

Tech Stack: React.js, Django, Spring Boot, Node.js, MySQL, JWT, AWS, GitHub Actions, JUnit, PyTest

IT Support Intern

May 2024 – Aug 2024

- Provided technical support to county offices and healthcare facilities
- Configured and maintained network infrastructure (routers, switches, Wi-Fi systems)
- Performed server maintenance, updates, and troubleshooting
- Supported the digital communications team in creating publications and digital content
- Assisted in improving workflow efficiency across departments
- Contributed to ICT operations and system support activities

Tech Stack: Windows OS, Active Directory, TCP/IP, DNS, DHCP, Linux Basics, Office 365

Independent Full-Stack Developer

2023 – Nov 2025

Freelance & Contract Projects — solo and in small collaborative teams

NyumbaLink Automated Rental Management Platform (300+ tenants & landlords)

- Built an app that lets landlords register tenants directly and manage properties without manual rent collection
- Integrated M-Pesa so tenants pay rent from their phones, with automatic digital receipts
- Built in-app messaging so tenants can report issues and communicate directly with landlords
- Added digital storage of signed tenancy agreements, viewable anytime by both parties
- Designed secure REST APIs and role-based access control for property listings and tenant management

PoultryOS Poultry Farm Management Platform (live, 20+ farms)

- Built a full SaaS platform covering production tracking, sales, payments, expenses, and flock health for poultry farms
- Implemented daily egg-collection tracking by cage/group with a heatmap view that flags low- or zero-production areas
- Built sales and customer management with tiered pricing, order fulfillment, and customer balance/credit tracking
- Integrated M-Pesa, bank transfer, and cash payment recording, linked to sales and weekly supply cycles
- Built expense tracking across feed, medicine, labor, and other categories, with cost trend comparisons over time
- Added flock health and vet tracking, including mortality records, vaccination scheduling, and automated due/overdue alerts
- Built PDF/CSV reporting across sales, payments, expenses, and health data, with filterable date ranges
- Implemented SaaS subscription billing with M-Pesa and Stripe checkout, trial handling, and premium-module access control
- Designed a responsive, role-based dashboard using MUI and Radix, with onboarding flow for first-time users
- Currently running as an active SaaS product used by 20+ farms

Omilife Web Platform

- Developed an e-commerce and automation system
- Built authentication systems and workflow automation tools
- Integrated internal and external APIs

Hardware Store POS & Inventory System

- Built an offline-first POS system with inventory tracking across multiple branches
- Integrated M-Pesa Till payment verification, processing 100+ transactions daily
- Developed a multi-branch reporting and audit logging system for real-time visibility across locations

Tech Stack: React.js, Django, Node.js, Python, MySQL, REST APIs, M-Pesa API, Stripe, MUI, Radix, Jest

KEY ACHIEVEMENTS

- Transitioned from freelance developer to a HealthTech engineering role
- Built and shipped PoultryOS, a live poultry farm management platform used by 20+ farms, including subscription billing via M-Pesa and Stripe
- Built NyumbaLink, an automated rental platform serving 300+ tenants and landlords
- Contributed to blockchain-enabled healthcare system architecture serving 200+ users
- Integrated M-Pesa payment systems across multiple commercial applications
- Maintained and deployed high-availability production environments

EDUCATION & CERTIFICATIONS

Diploma in Information Technology — Kasarani Technical and Vocational College	2025
Cybersecurity Fundamentals — Cisco Networking Academy	2024
Kenya Certificate of Secondary Education (KCSE) — Huduma School	2021

CAREER OBJECTIVE

To design and deliver secure, scalable, and high-performance systems that solve real-world healthcare and business challenges, while advancing expertise in full-stack engineering, enterprise backend systems, and cloud infrastructure.
